

ABSTRACT OF THE DISCLOSURE

[21] This invention provides multiple improvements for a collapsible baby stroller including; 1) allowing a vertical adjustment of the height of the handle to adjust for various heights of operators while maintaining the distance from the infant, 2) allowing the reversal of the direction of the handle to assist in maneuverability of the stroller and 3) allowing for easy removal of the handle and storage within a purse for theft protection when the stroller is to be left unattended.
